

MACRO SEASONS v4

Point-in-time regime portfolio and separate multi-strategy research ensemble

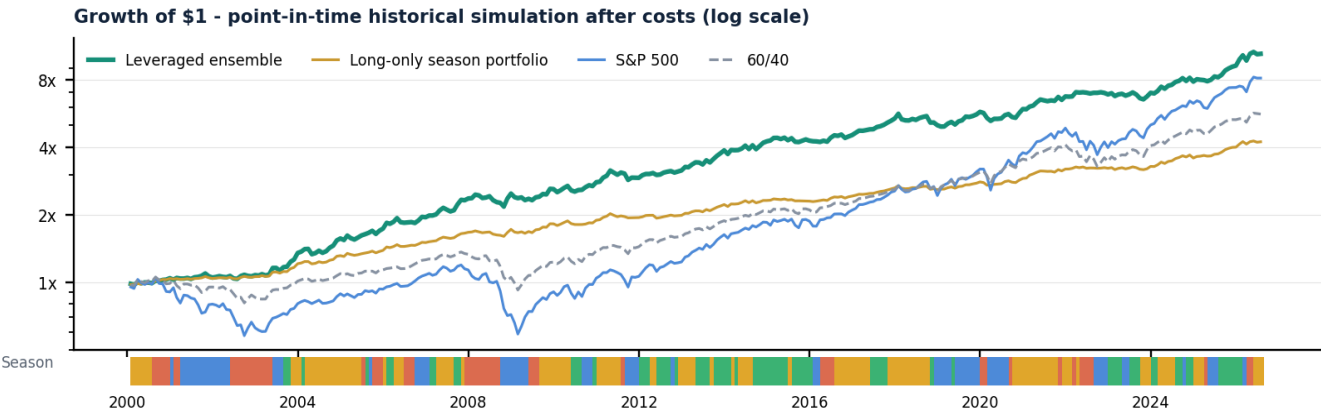

Frozen August 20, 2026. Monthly decisions use data available at each historical month-end. CPI, industrial production, payrolls and M2 are reconstructed from ALFRED vintages. Yahoo and FRED inputs are refreshed and freshness-gated before each production run.

August 2026 season call
Summer
Summer 30.7% | Spring 25.5% | Fall 24.0% | Winter 19.8%

Production integrity
49/49 freshness checks PASS; 4/4 ALFRED series PASS.
Live monitor: **PENDING**. First post-freeze return due September 30, 2026.

SEASON DEFINITION
Spring: growth rising, inflation cooling. **Summer:** growth rising, inflation heating.
Fall: growth falling, inflation heating. **Winter:** growth falling, inflation cooling. Liquidity changes probabilities and risk intensity, but not the quadrant labels.

TWO PORTFOLIO TRACKS
Long-only: a 100% ETF portfolio blending all four season sleeves, with real-rate, credit, momentum, trend and volatility controls. **Ensemble:** a distinct leveraged research strategy combining levered core, levered long-only and time-series momentum. Its return must not be read as the return of the ETF weights shown below.

HISTORICAL RESULTS - 26.6 YEARS, AFTER MODELED COSTS					
Portfolio	CAGR	Vol	Excess Sharpe	Max loss	Calmar
Long-only season portfolio	5.6%	4.5%	0.79	-5.5%	1.02
Leveraged ensemble	9.2%	8.5%	0.82	-12.4%	0.75
S&P 500	8.2%	15.2%	0.40	-50.8%	0.16
60/40	6.7%	9.5%	0.49	-32.3%	0.21

The table is a historical PIT backtest, not a live track record. Excess Sharpe is return above cash per unit of volatility. Calmar is CAGR divided by the absolute maximum drawdown. The 2019-2026 period has already informed research review and is not claimed as a new untouched holdout.

EXACT LONG-ONLY TARGET WEIGHTS - AUGUST 2026

Ticker	Asset	Weight	Ticker	Asset	Weight
BIL	T-Bills	40.81%	XLI	Industrials	3.31%
HYG	High yield	6.06%	VLUE	Value	3.30%
XLE	Energy	5.81%	XLB	Materials	2.95%
DBC	Commodities	5.63%	XLP	Staples	2.35%
IWM	Small caps	5.59%	XLV	Healthcare	2.24%
SPY	S&P 500	5.24%	SMH	Semiconductors	2.18%
QQQ	Nasdaq 100	3.70%	UUP	US dollar	1.43%
EEM	Emerging markets	3.55%	CPER	Copper	1.38%
SHY	1-3y Treasuries	3.37%	USMV	Min volatility	1.11%

Signal date: July 31, 2026. Exact weights sum to 1.000000. No sub-2% positions are hidden or redistributed. The 40.81% BIL allocation reflects the fresh daily trend gate; TIP, XHB and XLU did not pass that gate for this rebalance.

Sources: Federal Reserve FRED/ALFRED and Yahoo Finance. Frozen inputs and SHA-256 hashes are stored with the V4 release. Research only; not investment advice.
